Proposal for : **Tasia**
Country : **United Kingdom**
Project Name : **Sevyn—Multi-Tenant Compliance Management Platform**
Date : **October 18, 2026**

Content

Overview **5**
Background **6**
Functional Requirements **7**
1. Admin 7
● Organisation Management: Create and manage provider organisations through the documented SQL function 7
● User & Role Management: Manage Registered Managers and Support Workers, assign roles, and control access permissions 7
● Home & Unit Management: Create and manage residential homes, units, and their associated records 7
● Staff Management: Maintain staff profiles, DBS recheck dates, safeguarding training status, and other compliance records 7
● Compliance Monitoring: View organisation-level compliance dashboards with real-time red, amber, and green (RAG) indicators 7
● Audit Log: Access append-only audit records of relevant user actions and changes 7
● Policies & Documents: Manage policies, compliance documents, and training records using secure private storage 7
● System Configuration: Manage organisation settings and support initial tenant setup 7
2. Registered Manager 7
● Home & Unit Management: Manage assigned homes, units, young people's records, and staff information 7
● Young People's Records: Create, update, and review records, documents, and care-related information for young people 7
● Quick Logs: Record daily observations and updates, including progress tags such as Emotional Wellbeing and Health 7
● Task Management: Create, assign, track, and complete compliance and operational tasks 7
● Compliance Dashboard: Monitor live RAG status indicators based on actual dates, training records, and compliance requirements 7
● Audits & Policies: Manage audits, review policies, and track required actions 8
● Training Matrix: Monitor staff training requirements, completion dates, and expiry status 8
● DBS & Safeguarding Controls: Review staff eligibility and training status, with logged manager overrides where permitted 8
● Interim Measure Log: Add mandatory notes when a compliance item turns red; make active notes visible to all relevant staff until the item returns to green 8
● Ofsted Mode: Activate a privacy-focused view that masks staff addresses and other young people's names and groups information under the relevant Quality Standards 8
● Staff & Access Management: Manage staff access within assigned homes and review relevant audit activity 8

3. Support Worker..... 8
● Secure Sign-In: Sign in using a one-time code sent by email.....8
● Assigned Home Access: View only the homes and records they are authorised to access..... 8
● Young People's Records: View permitted information for young people within assigned homes, subject to safeguarding access restrictions.....8
● Quick Logs: Create daily logs and tag progress areas, such as Emotional Wellbeing and Health.....8
● Task Management: View assigned tasks, update progress, and mark tasks as completed.....8
● Documents & Policies: Access authorised documents through secure links.....8
● Compliance Dashboard: View relevant home-level compliance statuses and outstanding actions..... 8
● Interim Measure Log: View active interim measures and their required instructions..... 8
● Training Status: View relevant training requirements and completion status.....8
● Mobile-Friendly Interface: Use core screens on phones from 360px wide, with vertically stacked layouts and large touch targets.....8
4. Shared Platform Features..... 9
● Multi-Tenant Data Isolation: Supabase PostgreSQL Row-Level Security (RLS) prevents users from accessing another provider's data.....9
● Role-Based Access Control: Enforce permissions for Admin, Registered Manager, and Support Worker..... 9
● Authentication & Session Security: Password plus authenticator-based two-factor authentication (2FA) for managers and admins; emailed codes for Support Workers; automatic logout after 10 minutes of inactivity.....9
● Secure Document Storage: Private Supabase Storage, signed URLs, and authorised document access..... 9
● Append-Only Audit Logging: Record important actions, access events, and manager overrides without allowing ordinary users to modify or delete audit entries..... 9
● Automated RAG Statuses: Calculate red, amber, and green indicators using real date fields and defined compliance rules..... 9
● Backup & Recovery: Configure backups and verify restoration through a tested recovery process.....9
● Automated Security Testing: Run cross-tenant isolation tests in CI to verify that users cannot read or modify unauthorised tenant data.....9
● Demo Tenant: Provide fictional sample data for demonstrations and testing..... 9
● Responsive Design: Support desktop and mobile layouts, including real-iPhone testing. 9
● Deployment & Handover: Deploy to the client's accounts, rotate credentials, transfer the repository, document the system, and assist with creating the first two organisations.. 9

Support & Maintenance: 14
Packages: 14
Why I'm The Best 15
Additional information: 17
The scope is 100 percent on your brief, and the content parts need a reload, nothing else 17
The AI will just work for you, nothing else 17
No documents will be shared with AI services 17
I will provide you with 90 days of support, and this is final 17
Yes. Access will be blocked automatically, with manager overrides logged in the audit trail 17
We'll use Supabase RLS to isolate each provider's data 17
Automated tests will verify that cross-tenant data and files cannot be accessed or modified 17
Actually, it is best to do it in this way 17
Because I will be able to give the maximum time in this phase 17
Conclusion 18

Overview

Sevyn is a secure, web-based compliance management platform designed for children's residential and supported accommodation providers in England. The project involves transforming an existing React prototype into a fully functional, multi-tenant MVP for approximately three pilot organizations. The platform will centralize home and unit management, young people's records, staff information, documents, tasks, audits, policies, training matrices, and compliance dashboards with real-time red, amber, and green status indicators.

The application will support Admin, Registered Manager, and Support Worker roles, with strict data isolation, secure authentication, private document storage, and append-only audit logs. Additional features include staff compliance restrictions, interim measures, progress tracking, and privacy-focused Ofsted Mode. Built with React, TypeScript, Tailwind CSS, and Supabase, the responsive platform will undergo security and mobile testing, backup restoration validation, deployment, and documentation, with source code ownership and 90 days of free defect fixes.

Background

Sevyn is an emerging compliance platform designed to help children's residential and supported accommodation providers in England manage operational activities, staff compliance, safeguarding requirements, and regulatory documentation more efficiently. Currently, the project exists as a React prototype without authentication, database integration, or persistent storage.

The objective is to transform this prototype into a secure, production-ready MVP suitable for three pilot provider organisations. The development will introduce a multi-tenant architecture, role-based access control, centralized compliance management, automated status tracking, secure document handling, and audit trails. Particular emphasis will be placed on protecting sensitive information, enforcing strict data isolation between organisations, supporting mobile users, and providing clear compliance oversight through dashboards and an Ofsted-focused privacy view.

Functional Requirements

1. Admin

- Organisation Management: Create and manage provider organisations through the documented SQL function.
- User & Role Management: Manage Registered Managers and Support Workers, assign roles, and control access permissions.
- Home & Unit Management: Create and manage residential homes, units, and their associated records.
- Staff Management: Maintain staff profiles, DBS recheck dates, safeguarding training status, and other compliance records.
- Compliance Monitoring: View organisation-level compliance dashboards with real-time red, amber, and green (RAG) indicators.
- Audit Log: Access append-only audit records of relevant user actions and changes.
- Policies & Documents: Manage policies, compliance documents, and training records using secure private storage.
- System Configuration: Manage organisation settings and support initial tenant setup.

2. Registered Manager

- Home & Unit Management: Manage assigned homes, units, young people's records, and staff information.
- Young People's Records: Create, update, and review records, documents, and care-related information for young people.
- Quick Logs: Record daily observations and updates, including progress tags such as Emotional Wellbeing and Health.
- Task Management: Create, assign, track, and complete compliance and operational tasks.
- Compliance Dashboard: Monitor live RAG status indicators based on actual dates, training records, and compliance requirements.

- Audits & Policies: Manage audits, review policies, and track required actions.
- Training Matrix: Monitor staff training requirements, completion dates, and expiry status.
- DBS & Safeguarding Controls: Review staff eligibility and training status, with logged manager overrides where permitted.
- Interim Measure Log: Add mandatory notes when a compliance item turns red; make active notes visible to all relevant staff until the item returns to green.
- Ofsted Mode: Activate a privacy-focused view that masks staff addresses and other young people's names and groups information under the relevant Quality Standards.
- Staff & Access Management: Manage staff access within assigned homes and review relevant audit activity.

3. Support Worker

- Secure Sign-In: Sign in using a one-time code sent by email.
- Assigned Home Access: View only the homes and records they are authorised to access.
- Young People's Records: View permitted information for young people within assigned homes, subject to safeguarding access restrictions.
- Quick Logs: Create daily logs and tag progress areas, such as Emotional Wellbeing and Health.
- Task Management: View assigned tasks, update progress, and mark tasks as completed.
- Documents & Policies: Access authorised documents through secure links.
- Compliance Dashboard: View relevant home-level compliance statuses and outstanding actions.
- Interim Measure Log: View active interim measures and their required instructions.
- Training Status: View relevant training requirements and completion status.
- Mobile-Friendly Interface: Use core screens on phones from 360px wide, with vertically stacked layouts and large touch targets.

4. Shared Platform Features

- Multi-Tenant Data Isolation: Supabase PostgreSQL Row-Level Security (RLS) prevents users from accessing another provider's data.
- Role-Based Access Control: Enforce permissions for Admin, Registered Manager, and Support Worker.
- Authentication & Session Security: Password plus authenticator-based two-factor authentication (2FA) for managers and admins; emailed codes for Support Workers; automatic logout after 10 minutes of inactivity.
- Secure Document Storage: Private Supabase Storage, signed URLs, and authorised document access.
- Append-Only Audit Logging: Record important actions, access events, and manager overrides without allowing ordinary users to modify or delete audit entries.
- Automated RAG Statuses: Calculate red, amber, and green indicators using real date fields and defined compliance rules.
- Backup & Recovery: Configure backups and verify restoration through a tested recovery process.
- Automated Security Testing: Run cross-tenant isolation tests in CI to verify that users cannot read or modify unauthorised tenant data.
- Demo Tenant: Provide fictional sample data for demonstrations and testing.
- Responsive Design: Support desktop and mobile layouts, including real-iPhone testing.
- Deployment & Handover: Deploy to the client's accounts, rotate credentials, transfer the repository, document the system, and assist with creating the first two organisations.

Technology Stack

➔ Design UI/UX for web application and admin panel: Figma

➔ Frontend development: React, TypeScript, Tailwind CSS, Vite

➔ Authentication: Supabase Auth

➔ Admin panel dashboard frontend development: React JS

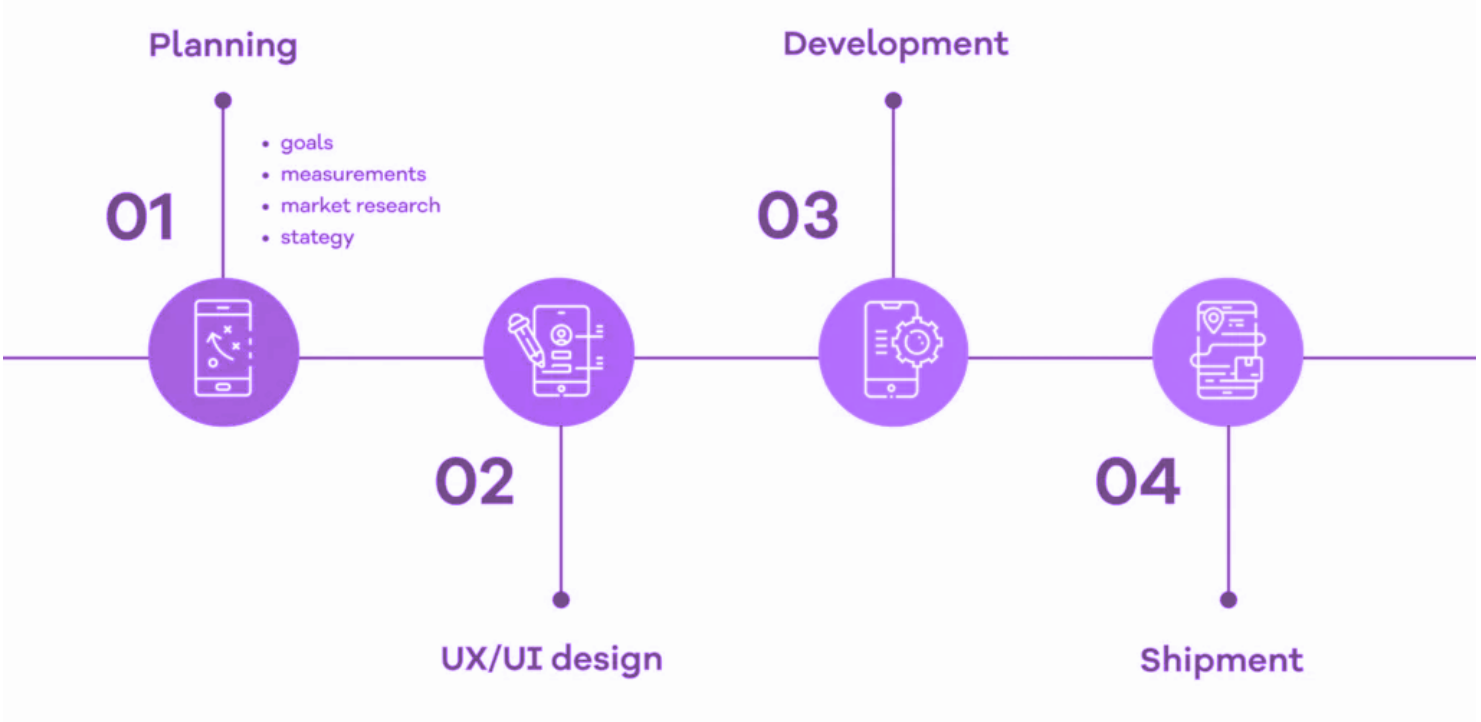

➔ AI: OpenAI GPT-4o (via official API), Claude, Gemini

➔ Email service: Resend

➔ Backend development: Supabase

➔ Database: Supabase PostgreSQL with Row-Level Security (RLS)

➔ Hosting: Cloudflare Pages (frontend) + Supabase (backend and database)

Cost Breakdown For App

Phases	Descriptions	Technology	Timeframe	Cost
1st	UX/UI design for website and admin dashboard	Using Figma	20 days	$800 USD
2nd	Frontend development	React, TypeScript, Tailwind CSS, Vite	20 days	$800 USD
3rd	Backend development for mobile app	Supabase, PostgreSQL, Row-Level Security (RLS), Supabase Auth OpenAI API	20 days	$800 USD
4th	Publishing on Cloudflare/Supabase	QA Testing	As per policy	$100 USD
90 days post-project support			After the delivery	Free
Phases	**Descriptions**	**Technology**	**Timeframe**	**Cost**
Total:			**90 days**	**$2,500 USD**

Total Cost: $2,500 USD

Total timeline: 90 days

Deliverables

- Responsive web application (mobile, tablet, and desktop compatible)
- Admin panel dashboard
- User-friendly UI design and interactive prototype
- Complete source code (frontend + backend)
- Secure authentication and role-based access control
- Multi-tenant database with Supabase PostgreSQL and RLS
- Compliance dashboard with automated red/amber/green status indicators
- Staff, young people's records, tasks, audits, and training management
- Secure document storage and Interim Measure Log
- Ofsted Mode privacy view
- Automated security tests, audit logs, and backup recovery setup
- Production deployment and configuration
- Project documentation and repository ownership transfer
- 90 days of free post-project defect support

Ownership:

At the end of the project, the source code will be sent to the client, and the client will have ownership and rights to the source code of the application.

Testing and Quality Assurance:

With our experience in the software development field, we can provide an extremely valuable third-party perspective when brought in to test/QA another vendor’s software. System testing is fundamental to the quality of any software. We always encourage our clients to include a distinct testing phase in any software project. This testing phase allows the system to be tested as a completed unit and is usually done by someone other than the developer. In this manner, additional user feedback on the functionality and usability of the software can be integrated prior to initial release. Completion of the testing phase is accomplished through preliminary use by actual end users of the software in the real-world conditions of the client's site.

Support & Maintenance:

We believe in providing a one-stop solution to our clients. After the development is completed, we will let you test the platform thoroughly. After we get the final version of the website, we will upload the system to your server and link the website with the domain.

We will be providing you with free post-project support for bug fixing for 90 days after the system is live.

Support includes;

- Security Updates: Security is the foremost priority of all the online systems in today's World. Our technical team will make sure that all your security certificates are up to date and if any update is needed in the system, we will be doing it right away to make sure no malicious activity is harming the system.
- Bug Fixing: The platform we will be creating will be a combination of lots of codes. If any part of the code malfunctions, the system can get crashed or any part of it can malfunction, if any bug is reported by any user, our team will provide you support and assistance on the bug fixing in accordance to the package you choose from the packages mentioned below.

Packages:

	Details	**Price**
Free Support	90 days after the final delivery	FREE

Standard Support	We will be providing you with immediate support for bug fixing on mail. The response time of our representative would be within 24 hours.	$100 - $150 Month for Bug Fixing

Why I'm The Best

Choosing the perfect partner for your mobile app development is essential for a hassle-free and successful project. Here's why I'm the right choice for you:

Custom Solutions Designed for You

I craft professional, high-performance web and mobile applications tailored specifically to your business needs and goals, ensuring an exceptional user experience.

Team Excellence at Work

Your project will be handled by a skilled and collaborative team, combining expertise to deliver seamless and high-quality results at every stage of development.

Complimentary Post-Delivery Support

I provide **90 days of free maintenance post-delivery**, addressing bugs or technical issues to keep your app running flawlessly.

Milestone-Based Payment System

With a structured milestone payment plan, you gain financial flexibility and can pay incrementally as the project progresses, ensuring transparency and peace of mind.

Cost-Effective Future Upgrades

Planning to enhance your app later? I offer affordable solutions for adding new features, ensuring your app evolves without breaking your budget.

Client-Centered Experience

Your satisfaction is my priority. I’m available 24/7 to support you throughout the development process, ensuring a smooth and enjoyable journey from start to finish.

Additional information:

The scope is 100 percent on your brief, and the content parts need a reload, nothing else.

The AI will just work for you, nothing else.

No documents will be shared with AI services.

I will provide you with 90 days of support, and this is final.

Yes. Access will be blocked automatically, with manager overrides logged in the audit trail.
We'll use Supabase RLS to isolate each provider's data.

Automated tests will verify that cross-tenant data and files cannot be accessed or modified.

Actually, it is best to do it in this way.

Because I will be able to give the maximum time in this phase.

Conclusion

Sevyn is designed to address the complex compliance and safeguarding challenges faced by children's residential and supported accommodation providers in England. By centralizing operational records, staff compliance, documentation, audits, and regulatory monitoring within a secure digital platform, it enables providers to maintain better oversight and respond proactively to emerging risks.

Features such as automated compliance indicators, staff access restrictions, mandatory interim measures, progress tracking, and privacy-focused Ofsted Mode support accountability, data protection, and informed decision-making. Built with a secure multi-tenant architecture and a responsive interface, Sevyn will provide a reliable foundation for its initial pilot organisations while allowing future expansion. Ultimately, the platform aims to simplify compliance management, strengthen safeguarding processes, improve operational transparency, and help providers maintain consistent standards of care.

Best regards,
Elio
